

REV ACQUIRES DRILL-READY NATURAL HYDROGEN PROJECT IN ALBERTA

VANCOUVER, British Columbia, May 22, 2025: REV Exploration Corp. (“REV” or the “Company”) (TSXV: REVX), formerly Gitenes Exploration, has signed an agreement to acquire 100% of an advanced drill-ready prospect (“Aden Dome”) on the Alberta-Montana border with high-impact potential for hosting Natural Hydrogen.

Aden Dome gives REV first-mover advantage in the Natural Hydrogen space in Alberta where additional opportunities and potential partnerships are being reviewed in the context of Premier Danielle Smith’s aggressive broader hydrogen strategy (refer to [May 16, 2025](#) REV news release) that has already made the province Canada’s top hydrogen producer. The discovery of low-cost, emissions-free Natural Hydrogen in Alberta could supercharge the province’s clean energy strategy. In addition, as disclosed in a news release [May 15, 2025](#), REV now has exploration permits for Natural Hydrogen spanning 3,726 sq. km in neighboring Saskatchewan.

Aden Dome, never previously viewed from a Natural Hydrogen perspective, covers an 18-sq. km area encompassing a series of PNG leases on the southern tip of Alberta, approximately 160 km southeast of Lethbridge and 125 km west of the Saskatchewan border, in a district well-known for shallow gas production.

Aden Dome Highlights

- REV’s model for the accumulation of naturally occurring hydrogen (NOH) makes the Aden Dome particularly intriguing as a Natural Hydrogen prospect in addition to promising value-added opportunities with respect to other potential clean gas discoveries;
- REV’s plan is to drill through the igneous intrusives and test for the presence of NOH within the deeper Basal Cambrian Sandstone and Basement Complex;
- Intense fracturing at Aden Dome, which may have provided connectivity to deeper crustal source rocks, is also consistent with the REV model for the generation of Natural Hydrogen;
- The shallower Devonian Beaverhill Lake carbonates and Basal Cambrian sandstone intervals are considered very prospective for hosting economic concentrations of helium and associated gases based on seismic data (definitive 4-way closure) and historic core and log analysis that indicate excellent reservoir quality rock over multiple horizons;
- The Aden Dome is an extension of the Sweetgrass Hills intrusive-volcanic complex immediately to the southwest in Montana where recent helium discoveries have been made with nearby competitor production online.

Mr. Jordan Potts, REV Exploration CEO, commented: *“The Aden Dome is a highly compelling asset within a district that features mature Cretaceous shallow gas production and excellent oil and gas infrastructure. We’re very fortunate to have acquired this asset on favorable terms as our team sees target pay zones at Aden beyond the possibility of Alberta’s first Natural Hydrogen discovery.”*

Mr. Potts continued: *“We look forward to rolling out the Aden story and capturing the very exciting broader opportunity for shareholders through REV’s first-mover advantage in Natural Hydrogen in Alberta.”*

Terms of the Deal

REV has executed an asset purchase agreement (the “Agreement”) with an arms-length party (the “Vendor”) to acquire all the Vendor’s PNG leases associated with Aden Dome (the “Assets”), and an adjacent property, for total consideration of \$300,000 cash and 300,000 common shares of REV (“Common Shares”), subject to TSX Venture Exchange approval, on the following schedule:

1. \$100,000 cash to be paid to Vendor upon signing of the deal (paid);
2. \$200,000 cash to be paid to Vendor by July 15, 2025;
3. 300,000 Common Shares to be issued to the Vendor at a deemed price of \$0.27 per Common Share, subject to a statutory hold period of 4 months and a day following the date of issuance.

The Vendor will hold the Assets in trust until the second cash payment and issuance of Common Shares are completed. If required payments or Common Shares issuance are not made, the Agreement will be terminated, all Assets will revert to the Vendor, and any payments made will be forfeited.

Aden Dome Property Map

About REV Exploration Corp.

REV is a mineral exploration company that owns a suite of gold and battery metal properties in Quebec, specifically in the Sept-Iles region (nickel, niobium and tantalum) and the Chapais-Chibougamau area (gold), in addition to a substantial portfolio of strategic 100%-owned Natural Hydrogen properties in Saskatchewan, acquired through permits issued by the Saskatchewan government. REV is also a first-mover in Natural Hydrogen in Alberta and has executed an agreement with an arms-length party to acquire 100% of the Aden Dome along the Alberta-Montana border.
